

Curriculum Outcome

A1 Solve problems that require the manipulation and application of formulas related to: perimeter, area, volume, capacity, the Pythagorean theorem, primary trigonometric ratios, income, currency exchange, interest and finance charges.

G2 Demonstrate an understanding of the Pythagorean theorem by: identifying situations that involve right triangles, verifying the formula, applying the formula, solving problems.

G3 Demonstrate an understanding of primary trigonometric ratios (sine, cosine, tangent) by: applying similarity to right triangles, generalizing patterns from similar right triangles, applying the primary trigonometric ratios, and solving problems.

Trigonometry in the Real World

There are many examples of and uses for trigonometry from astronomy to carpentry and even sports

Recall

Pythagorean Theorem

To find the hypotenuse

$$c^2 = a^2 + b^2$$

To find the leg

$$b^2 = c^2 - a^2$$

The Trigonometric Ratios

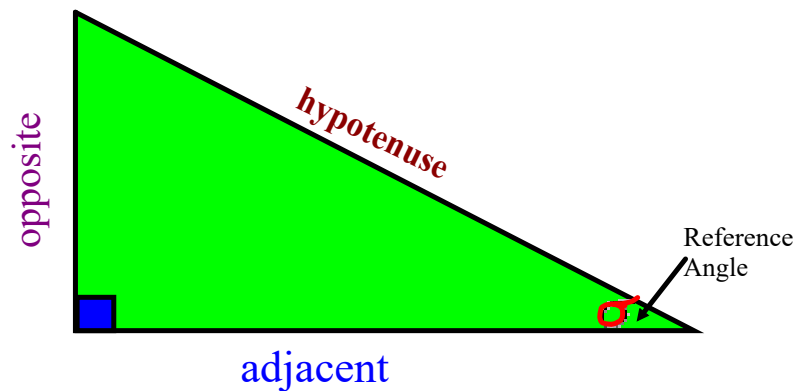

Definitions:

Opposite: Having a position on the other or further side of something

Adjacent: Having a position next to or adjoining something

The Trigonometric Ratios

Trigonometric Ratios - constant values based on the ratios of sides for particular angles in right-angled triangles

Adjacent: Having a position next to or adjoining something

"Theta"

σ

$\sin \theta$

θ θ

Theta represents the angle.

Primary Ratios of Trigonometry

$$\underline{\text{Sine}} \quad \sin \theta = \frac{\text{Opposite Side}}{\text{Hypotenuse}} = \frac{o}{h}$$

$$\underline{\text{Cosine}} \quad \cos \theta = \frac{\text{Adjacent Side}}{\text{Hypotenuse}} = \frac{a}{h}$$

$$\underline{\text{Tangent}} \quad \tan \theta = \frac{\text{Opposite Side}}{\text{Adjacent Side}} = \frac{o}{a}$$

Remember This Saying !!

"Oscar Had Another Helping Of Apples"

$\sin \theta = \frac{o}{h}$ Opposite Side
Hypotenuse

$\cos \theta = \frac{a}{h}$ Adjacent Side
Hypotenuse

$\tan \theta = \frac{o}{a}$ Opposite Side
Adjacent Side

Remembering the Primary Ratios...

Two Cats Sat On An Orange And Held Hands

Finding The Primary Ratios

1.

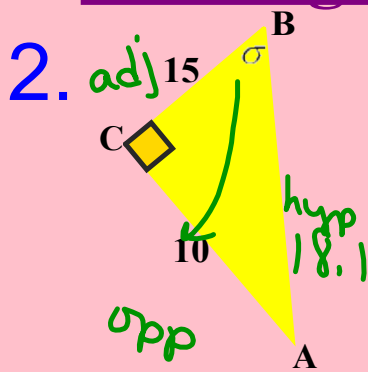

You must always have a right-angled triangle!

Where is theta?

$$\begin{array}{l}
 \sin \theta = \frac{\text{opp}}{\text{hyp}} \\
 \sin \theta = \frac{4}{5} \\
 \sin \theta = 0.8 \\
 \theta = \sin^{-1}(0.8) \\
 \theta = 53^\circ
 \end{array}
 \left\{
 \begin{array}{l}
 \cos \theta = \frac{\text{adj}}{\text{hyp}} \\
 \cos \theta = \frac{3}{5} \\
 \cos \theta = 0.6 \\
 \theta = \cos^{-1}(0.6) \\
 \theta = 53^\circ
 \end{array}
 \right.
 \left\{
 \begin{array}{l}
 \tan \theta = \frac{\text{opp}}{\text{adj}} \\
 \tan \theta = \frac{4}{3} \\
 \tan \theta = 1.3333 \\
 \theta = \tan^{-1}(1.3333) \\
 \theta = 53^\circ
 \end{array}
 \right.$$

Finding The Primary Ratios

$$\sin \sigma = \frac{\text{opp}}{\text{hyp}}$$

$$= \frac{10}{18.1}$$

$$\sin \sigma = 0.5525$$

$$\cos \sigma = \frac{\text{adj}}{\text{hyp}}$$

$$= \frac{15}{18.1}$$

$$\cos \sigma = 0.8287$$

$$\tan \sigma = \frac{\text{opp}}{\text{adj}}$$

$$= \frac{10}{15}$$

$$\tan \sigma = 0.6667$$

Am I missing something?

$$c^2 = a^2 + b^2$$

$$c = 18.1$$

Finding The Primary Ratios

3.

$$\sin\sigma = \frac{\text{opp}}{\text{hyp}} \quad \cos\sigma = \frac{\text{adj}}{\text{hyp}} \quad \tan\sigma = \frac{\text{opp}}{\text{adj}}$$

Find the missing side first...

Use the sides to find the ratios...(then decimal)

use the inverse to find the angle

Example:

State the 3 primary trig ratios for the triangle for the given reference angle

Classwork/Homework

worksheet 1
Trig Ratios : Label hyp, opp, adj

Primary Trig Ratios

For Calculator DEG Mode

** For each of the following list the three primary trig ratios, and theta.
