

The trough down the centre of a cattle barn is 40 cm wide at the top and 20 cm at the bottom. It is 30 cm deep and 8 m long. The trough is being filled at the rate of $0.25 \text{ m}^3/\text{min}$. How fast is the water level in the trough rising when the water is 20 cm deep in the trough?

$$\frac{dV}{dt} = 0.25 \text{ m}^3/\text{min}$$

$$V_{\text{PRISM}} = \text{Area of Face} \times \text{Length}$$

could use..

Area of Trapezoid

$$A = \frac{1}{2}(a+b)h$$

$$V = \left(\frac{1}{2}wh + 0.2h + \frac{1}{2}wh \right) 8$$

$$V = (wh + 0.2h) 8$$

$$V = 8wh + 1.6h \leftarrow \text{3 variables}$$

Similar Shapes

$$\frac{0.1}{w} = \frac{0.3}{h}$$

$$\frac{0.3w}{0.3} = \frac{0.1h}{0.3}$$

$$w = \frac{1}{3}h$$

$$V = 8 \left(\frac{1}{3}h \right) h + 1.6h$$

$$V = \frac{8}{3}h^2 + 1.6h$$

$$\frac{dV}{dt} = \frac{16}{3}h \frac{dh}{dt} + 1.6 \frac{dh}{dt}$$

$$0.25 = \frac{16}{3}(0.2) \frac{dh}{dt} + 1.6 \frac{dh}{dt}$$

$$0.25 = 2.667 \frac{dh}{dt}$$

$$\frac{dh}{dt} = \frac{0.25}{2.667} = 0.09375 \text{ m/min}$$

Warm Up

A spherical hailstone is increasing in size at the rate of $2 \text{ cm}^3/\text{min}$. as it falls from the clouds. Determine the rate at which the radius of the hailstone is increasing at the instant it has a surface area of $4\pi \text{ cm}^2$. $SA = 4\pi r^2$ $V = \frac{4}{3}\pi r^3$ Answer: $\frac{1}{2\pi} \text{ cm}/\text{min}$. [5]

$$V = \frac{4}{3}\pi r^3$$

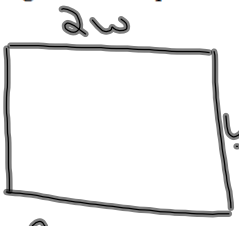

$$\frac{dV}{dt} = 4\pi r^2 \frac{dr}{dt}$$

$$2 = 4\pi r^2 \frac{dr}{dt}$$

$$\frac{dr}{dt} = \frac{2}{4\pi} \text{ cm}/\text{min} = \frac{1}{2\pi} \text{ cm}/\text{min}$$

Handwritten notes: $4\pi = 4\pi r^2$, $1 = r^2$

A rectangle is expanding so that its length is always twice its width. The perimeter of the rectangle is increasing at a rate of $6 \text{ cm}/\text{min}$. Find the rate of increase of the area of the rectangle when the perimeter is 40 cm . [5]

$$P = 6w$$

$$\frac{dP}{dt} = 6 \frac{dw}{dt}$$

$$6 = 6 \frac{dw}{dt}$$

$$1 = \frac{dw}{dt}$$

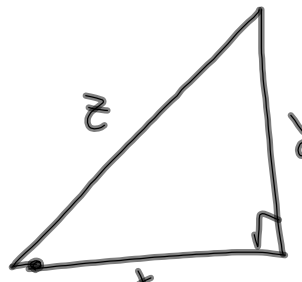

$$A = 2w^2$$

$$\frac{dA}{dt} = 4w \frac{dw}{dt}$$

$$\frac{dA}{dt} = 4\left(\frac{20}{6}\right)(1) = \frac{80}{3} \text{ cm}^2/\text{min}$$

Handwritten notes: $P = 6w$, $\frac{40}{6} = w$

A dog running at 5 m/s is chasing a squirrel running at the rate of 4 m/s . The squirrel dashes up a telephone pole in attempt to get away from the canine. If the dog is 16 m behind the squirrel when it begins to climb the pole, what is the rate at which the distance between the two animals is increasing 2 seconds after the squirrel starts up the pole? [5]

$$x^2 + y^2 = z^2$$

$$2x \frac{dx}{dt} + 2y \frac{dy}{dt} = 2z \frac{dz}{dt}$$

$$\frac{dx}{dt} = -5 \text{ m/s}$$

$$\frac{dy}{dt} = 4 \text{ m/s}$$

$$z = \sqrt{100}$$

$$z = 10 \text{ m}$$

$$8 \text{ m} = y$$

$$6(-5) + 8(4) = 10 \frac{dz}{dt}$$

$$-30 + 32 = 10 \frac{dz}{dt}$$

$$2 = 10 \frac{dz}{dt}$$

$$\frac{1}{5} \text{ m/s} = \frac{dz}{dt}$$

Handwritten notes: $\frac{1}{5} \text{ m/s}$
