

Warm Up

1. Sketch the following angle: -545
2. Determine a negative angle co-terminal with 200 .
3. Determine the principal angle of -78453

4. If $\sec \theta = -\frac{\sqrt{10}}{3}$ and $\sin \theta > 0$, determine the value of $\csc \theta$.

exact
(No calculator)

$\approx 200^\circ - 360^\circ = -160^\circ$

≈ -78453
 $+360$

 -217.925
 $+217$

 -0.925
 $\times 360$

 -333
 $+360^\circ$

 27°

$\sec \theta$

4. If $\sec \theta = -\sqrt{10}$ and $\sin \theta > 0$, determine the value of $\csc \theta$.

Quadrant??

$y^2 = (\sqrt{10})^2 - (1)^2$
 $y^2 = 9$
 $y = 3$

$\sec \theta = \frac{\text{hyp}}{\text{adj}}$

$\csc \theta = \frac{\sqrt{10}}{3}$

$\sec \theta = -\frac{\sqrt{10}}{3}$
 $= \frac{r}{x}$

Applications of Right Angle Trigonometry...

Great set of problems to demonstrate some applications of trigonometry...

Page 84 - 87

#9, 10, 11, 13, 14, 15, 17, 19, 20, 24

You have one hour to get through as many of these problems as possible...GO!!

$N 35^\circ E$

$S 40^\circ W$

#14)
