

Practice Problems...

Page 176 - 179

#14, 15, 16, 19, 20 a, b, 21, 22, 23, 24, 25, 26, 27

$$Q = \frac{a}{\sqrt{r}}$$

$$69.375^\circ$$

$$0.375 \times 60 = \underline{\underline{22.5}}$$

$$69^\circ 22' 30''$$

\uparrow Minutes \uparrow Seconds

$0.5 \times 60 \text{ sec}$

$$14.565^\circ \Rightarrow 14^\circ 33' 54''$$

$$0.565 \times 60 = 33.9 \text{ min}$$

$$0.9 \times 60 = 54 \text{ sec}$$

$$77.827^\circ = \underline{\underline{77^\circ 49' 37''}}$$

19. 1 Rot = 400 grad

$$360^\circ = 400 \text{ grad}$$

$$2\pi \text{ Rad} = 400 \text{ grad}$$

$$a) 50^\circ \times \frac{400 \text{ grad}}{360^\circ} = \underline{55.5 \text{ grad}}$$

b) factor label method

Warm Up

A basketball rolling across the floor completes 75 revolutions per minute. The linear velocity of the basketball is 2.5 m/s. Find the radius of the basketball and its angular velocity.

$$\begin{aligned}
 &75 \cancel{\text{Rpm}} \times 2\pi \frac{\text{Rad}}{1 \cancel{\text{Rev}}} \\
 &= 150\pi \text{ Rad/min.} \times \frac{1 \text{ min}}{60 \text{ Sec}} \\
 &= \underline{7.85 \text{ Rad/Sec}}
 \end{aligned}$$

$$\theta = \frac{a}{r}$$

After 1 Sec ...

$$r = \frac{a}{\theta}$$

$$arc = 2.5m$$

$$\theta = 7.85 \text{ Rad}$$

$$r = \frac{2.5m}{7.85 \text{ Rad}}$$

$$\boxed{r = 0.32m}$$

$$C = 2\pi r$$

Reference Triangles:

Definition 17 The reference angle $\bar{\theta}$ of an angle θ in standard position is the acute angle (between 0 and 90°) the terminal side makes with the x -axis.

The picture below illustrates this concept.

What is the significance of reference angles?

Angles on the Cartesian Plane

- **Reference Angle** - an acute angle formed between the terminal arm and the x-axis.
- **Reference Triangle** - a triangle formed by drawing a perpendicular line from a point on the terminal to the x-axis.

Notice what will happen if the rotation moves into other quadrants?

TRIG RATIOS on the CARTESIAN PLANE

$$\sin \theta = \frac{y}{r}$$

$$\csc \theta = \frac{r}{y}$$

$$\cos \theta = \frac{x}{r}$$

$$\sec \theta = \frac{r}{x}$$

$$\tan \theta = \frac{y}{x}$$

$$\cot \theta = \frac{x}{y}$$

"Primary"

"Reciprocal"

TRIG RATIOS IN ALL 4 QUADRANTS

What primary trig ratios are **POSITIVE** in...

$\cos (-)$
 If $\sec \theta = -\sqrt{10}$ and $\sin \theta > 0$, determine the value of $\csc \theta$

→ Where is θ ?

$$y^2 + 1^2 = \sqrt{10}^2$$

$$y^2 = 10 - 1$$

$$y = 3$$

$$\sec \theta = -\frac{\sqrt{10}}{1}$$

$$\csc \theta = \frac{\sqrt{10}}{3}$$

Example

Determine the measure (in radians) of an angle whose terminal arm passes through the ordered pair $(-2\sqrt{3}, -4)$

Radians:

$$\tan \theta = \frac{4}{2\sqrt{3}}$$

$$\tan^{-1} \left(\frac{4}{2\sqrt{3}} \right)$$

$$\theta = 0.8571 \text{ R}_{ad}$$

$$+ \pi$$

$$\theta = 3.999 \text{ R}_{ad}$$

$$229^\circ \times \frac{\pi \text{ R}_{ad}}{180^\circ}$$
