

Notes from presentation...

Adaptations:

- Atlantic Salmon are anandromous, which means that they migrate from the rivers to the sea.
- One of the main adaptations is their gills. There are four sets and each gill contains “specialized cells” that allow them to travel between salt water and fresh water.
- “The Lateral Line” is very important. It allows salmon to “detect” movement in the water, whether it be other fish, or even water currents. Knowing the flow of the water is important because the salmon need to know the difference between upstream and downstream to migrate.
- **Salmon have the ability to filter the salt water in their gills without absorbing it into the blood stream.**

Fly Nation: The New Brunswick Adventure Extended

from **Vantage Point Media House** PRO 11 months ago NOT YET RATED

Director's Cut. An exclusive extended episode of Fly Nation Season 2 filmed on World-class Atlantic Salmon rivers in the beautiful province of New Brunswick.

New Fly Nation host, Ashley Rae, joins Atlantic Salmon guru Jacques Heroux and Tourism New Brunswick's Serge Collin on an adventure of a lifetime to 3 of the best lodges in the entire province, the Restigouche River Lodge, Wilson's Sporting Camps and the Upper Oxbow Outdoor Adventures lodge. All 3 are truly fly fishing destinations to dream about.

Watch the entire special extended episode online, brought to you by Tourism New Brunswick and make sure to check us out on [Facebook](#) and let us know what you think!
