# Thursday, March 19/15 Science 122

- 1. Quiz Spherical Mirrors: Ray Diagrams
- 2. Check -> Worksheet Mirror Problems (PP Old Red Text)
- 3. Lenses Focal Length
  - Convex Lenses
  - Ray Diagrams HW Complete Convex Ray Diagrams
  - Lens Equation, Magnification and Sign Conventions

### Thursday, March 19/15 Physics 122/121

- 1. Experiment 10.2 Torques Page 68- 4 Days Late Today
- 2. Riverboat Simulator Activity 2 Days Late
- 3. Quiz Torque and Relative Velocity
- 4. 1D Collisions
- 5. Worksheet 1D Collisions HW

## Thursday, March 19/15 Science 10

- 1. Assignment Your Name in Chemical Symbols
  - Period 6 -> 1 Day Late Today
  - Period 4 -> Due: Today, March 19/15
- 2. Quiz Matter to Simple Binary Ionic Compounds
  - Monday, March 23/15
  - Topics
- 3. Simple Binary Ionic Compounds
- 4. Worksheet #2 Simple Binary Ionic Compounds HW P4
- 5. Polyatomic Ions
- 6. Polyatomic Ionic Compounds To Be Continued P6
- 7. Worksheet #3 Ionic Compounds Containing Polyatomic Ions
- 8. Multivalent Metals and Their Ions
- 9. Ionic Compounds Involving Multivalent Metals
- 10. Worksheet #4 Ionic Compounds Containing Multivalent Metals

#### **Quiz - Matter to Simple Binary Ionic Compounds**

Topics:

- 1. matter -> has mass and takes up space
- 2. physical properties -> observed with senses
  - -> color, texture, odor, taste, lustre, malleability, ductility, brittleness, solubility, state of matter (solid, liquid, gas)
- chemical properties -> ability/inability to undergo a change that alters its composition like corrosion, tarnishing, rusting, exploding
- 4. distinguish between physical and chemical changes
- 5. evidence that a chemical reaction has occurred
  - color change
  - formation of a precipitate (solid)
  - heat or light given off
  - odor produced
  - production of bubbles
  - change in temperature
- 6. classification of matter:
  - pure substances (elements and compounds)
  - mixtures (solutions and heterogeneous mixtures)
- 7. atoms -> building blocks of matter
  - -> three subatomic particles: p+, n, e-
  - -> electrically neutral: #p+ = #e-
- 8. atomic number = number of protons
- 9. periodic table of the elements consist of periods (rows) and groups/families (columns)
  - be able to label family and period names
    - elements are represented by chemical symbols
    - be able to draw staircase line
    - locate metals, nonmetals and metalloids
- 10. characteristics of metals and nonmetals
- 11. ions -> atoms that have gained or lost electrons
  - -> cations/positive ions/metallic ions <a href="https://example.com/redailings/"><a href="https://example.com/redailings/"><a href="https://example.com/redailings/"><a href="https://example.com/redailings/"><a href="https://example.com/redailings/"><a href="https://example.com/redailings/"><a href="https://example.com/redailings/"><a href="https://example.com/redailings/"><a href="https://example.com/redailings/">> a href="https://example.com/redailings/"><a href="https://example.com/redailings/">> a href="https://example.com/redailings/">> a href="https://example.com/redailings/">> a href="https://example.com/redailings/"><a href="https://example.com/redailings/">> a href="https://example.com/redailings
  - -> anions/negative ions/nonmetallic ions
  - -> be able to state ion names, number of protons, number of electrons and ion charges
  - -> be able to name monatomic ions
- 12. ionic bonds formed when electrons are transferred from metals to nonmetals

13. simple binary ionic compounds - consist of 2 elements
- electrically neutral
- be able to name and provide chemical formulas

You will need your two periodic tables. ←

## Polyatomic Ions

Poly means "many". Polyatomic means "many atoms". <u>Polyatomic ions</u> contain two or more different atoms. The atoms stay together as a single, charged unit.

Endings to look for: "ate", "ite"

nitrate 
$$\begin{bmatrix} 1 & 1 & 1 \\ 1 & 1 & 1 \\ 1 & 1 & 1 \end{bmatrix}$$
 nitrite  $\begin{bmatrix} 1 & 1 & 1 \\ 1 & 1 & 1 \\ 1 & 1 & 1 \end{bmatrix}$  chlorite  $\begin{bmatrix} 1 & 1 & 1 \\ 1 & 1 & 1 \\ 1 & 1 & 1 \end{bmatrix}$  sulfite  $\begin{bmatrix} 1 & 1 & 1 \\ 1 & 1 & 1 \\ 1 & 1 & 1 \end{bmatrix}$  sulfite  $\begin{bmatrix} 1 & 1 & 1 \\ 1 & 1 & 1 \\ 1 & 1 & 1 \end{bmatrix}$ 

acetate CH<sub>3</sub>COO or CH<sub>3</sub>CO<sub>2</sub> or C<sub>2</sub>H<sub>3</sub>D<sub>2</sub>

hydrogen carbonate or bicarbonate HCO<sub>3</sub>

Note: hydroxide OH cyanide CN

Note: ammonium NH<sub>3</sub>

See your periodic tables for more examples.

## Ionic Compounds Containing Polyatomic Ions

Like binary ionic compounds, ionic compounds containing polyatomic ions are electrically neutral.

When more than one polyatomic ion is required in an ionic compound, parentheses are used to enclose the ion with the subscript going outside the parentheses.

Write the correct name for:

brackets (

- 1) AIPO4 a luminum phosphate
- 2) KNO2 potassium nitrite
- 3) NaHCO3 Sodium hydrogen carbonate 4) CaCO3 (allium Calbonate
- 5) Mg(OH)2 magnesiam hydroxide

\*

6) Ba(CN)<sub>2</sub>

To Be Continued

- 7)  $K_2SO_4$
- 8) NH<sub>4</sub>NO<sub>3</sub>
