# Homework Solutions

Worksheet - Surface Area of Prisms and Cylinders.docx

## Solutions...

- 1) 88 ft<sup>2</sup> 2) 169.6 in<sup>2</sup> 3) 96 mm<sup>2</sup> 4) 276.5 yd<sup>2</sup>
- 5) 361.4 cm<sup>2</sup> 6) 304 m<sup>2</sup> 7) 210 mi<sup>2</sup> 8) 325.8 km<sup>2</sup>
- 9) 464.0 ft<sup>2</sup> 10) 558 m<sup>2</sup> 11) 378 cm<sup>2</sup> 12) 1164.9 in<sup>2</sup>
- 13) 726 m<sup>2</sup> 14) 1043.6 cm<sup>2</sup> 15) 1441.1 mm<sup>2</sup> 16) 2339.9 in<sup>2</sup>

The triangular sides of a pyramid are called **lateral faces**. The altitude or height of each lateral face is called the **slant height**. The surface area of a pyramid is the sum of the areas of the lateral faces, or **lateral area**, plus the area of the base.

## **EXAMPLE 1** Find the surface area of the square pyramid.

Find the lateral area and the base area.

#### Area of each lateral face

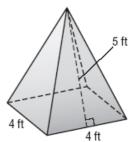

$$A = \frac{1}{2}bh$$
 Area of a triangle  $A = \frac{1}{2}(4)(5)$   $b = 4, h = 5$   $A = 10$  Simplify

There are 4 faces, so the lateral area is 4(10) or 40 square feet.

#### Area of base

$$A = s^2$$
 Area of a square  $A = 4^2$  or  $16$   $s = 4$ 

The surface area of the pyramid is the sum of the lateral area and the area of the base, 40 + 16 or 56 square feet.

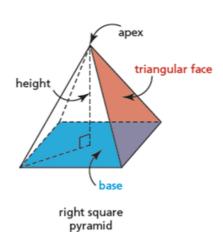

A **right pyramid** is a 3-dimensional object that has triangular faces and a base that is a polygon.

The shape of the base determines the name of the pyramid.

The triangular faces meet at a point called the apex.

The *height* of the pyramid is the perpendicular distance from the apex to the centre of the base.

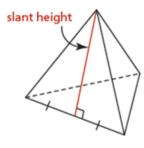

1.4 Surface Areas of Right Pyramids and Right Cones

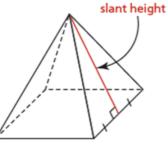

When the base of a right pyramid is a regular polygon, the triangular faces are

When the base of a right pyramid is a regular polygon, the triangular faces are congruent. Then the **slant height** of the right pyramid is the height of a triangular face.

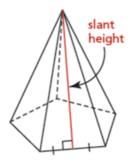

regular tetrahedron

right square pyramid

right pentagonal pyramid

The surface area of a right pyramid is the sum of the areas of the triangula faces and the base.

A *tetrahedron* is a triangular pyramid.

A regular tetrahedron has 4 congruent equilateral triangular faces. This right square pyramid has a slant height of 10 cm and a base side length of 8 cm.

This net shows the faces and base of the pyramid.

The area, A, of each triangular face is:

$$A = \frac{1}{2} (8)(10)$$

$$A = 40$$

The area, B, of the base is:

$$B = (8)(8)$$

$$B = 64$$

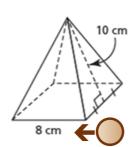

So, the surface area, SA, of the pyramid is:

$$SA = 4A + B$$

$$SA = 4(40) + 64$$

$$SA = 224$$

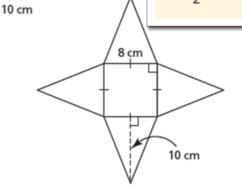

The surface area of the pyramid is 224 cm<sup>2</sup>.

The area, A, of a triangle with base, b, and height, h, is:

$$A = \frac{1}{2}bh$$

nt Cones

**Determining the Surface Area of a Regular Tetrahedron Given Its Slant Height** 

7.8 cm

**CHECK YOUR UNDERSTANDING** 

Jeanne-Marie measured then recorded the lengths of the edges and slant height of this regular tetrahedron. What is its surface area to the nearest square centimetre?

A = 35.1 cm<sup>2</sup>

SA = 4x35.1

YA 35.1

The surface area of the tetrahedron is approximately 140 cm<sup>2</sup>.

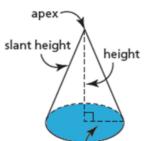

A *right circular cone* is a 3-dimensional object that has a circular base and a curved surface.

The *height* of the cone is the perpendicular distance from the apex to the base. The *slant height* of the cone is the shortest distance on the curved surface between the apex and a point on the circumference of the base.

A right circular cone is usually called a **right cone**.

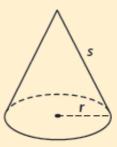

## Surface Area of a Right Cone

Surface area = lateral area + base area

For a right cone with slant height *s* and base radius *r*:

$$SA = \pi rs + \pi r^2$$

# **QUIZ TIME...**Conversions

\*When finished, work on the...

# **HOMEWORK:**

Worksheet - Surface Area of Pyramids and Cones.pdf

#### Surface Area of a Pyramid

SA = Area Base + Area of Triangular Faces

where Area of a Triangle is

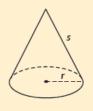

$$A = \frac{1}{2}bh$$

### Surface Area of a Right Cone

Surface area = lateral area + base area

For a right cone with slant height s and base radius r:

 $SA = \pi rs + \pi r^2$
