**UNIT 7: SIMILARITY AND
TRANSFORMATIONS**

7.4: SIMILAR TRIANGLES

**M. MALTBY INGERSOLL
AND T. SULLIVAN
*MATH 9***

WHAT'S THE POINT OF TODAY'S LESSON?

We will continue working on the Math 9 Specific Curriculum Outcome (SCO) "Shape and Space 3" OR "SS3" which states:

"Demonstrate an understanding of similarity of polygons."

SIMILAR TRIANGLES

TO IDENTIFY SIMILAR TRIANGLES:

* the measures of the 3 pairs of corresponding angles must be EQUAL

OR

* the ratios of the lengths of the 3 pairs of corresponding sides must be EQUAL; in other words, corresponding sides are proportional

MMS9, Page 344:

Properties of Similar Triangles

To identify that $\triangle PQR$ and $\triangle STU$ are similar, we only need to know that:

- $\angle P = \angle S$ and $\angle Q = \angle T$ and $\angle R = \angle U$; or
- $\frac{PQ}{ST} = \frac{QR}{TU} = \frac{PR}{SU}$

WARM UP: A flag pole casts a shadow 13.2 m long. At the SAME time, a woman with a height of 1.65 m casts a shadow 2.4 m long.

9.1m

a) Sketch and label a diagram. (It should contain a small triangle inside of a large triangle.)

b) PROVE that the two triangles in your diagram are SIMILAR.

c) What is the height of the flag pole to the nearest tenth of a metre?

b)

$$\angle B = \angle Y \text{ (GIVEN)}$$

$$\angle C = \angle C \text{ (COMMON)}$$

$$\angle A = \angle X \text{ (SATT)}$$

$$\therefore \triangle ABC \sim \triangle XYC \text{ (AAA)}$$

c)

$$SF = \frac{s}{o}$$

$$= \frac{13.2}{2.4}$$

$$= 5.5$$

$$h = 5.5(1.65)$$

$$= 9.075$$

$$= 9.1\text{m}$$

HOMWORK QUESTIONS?

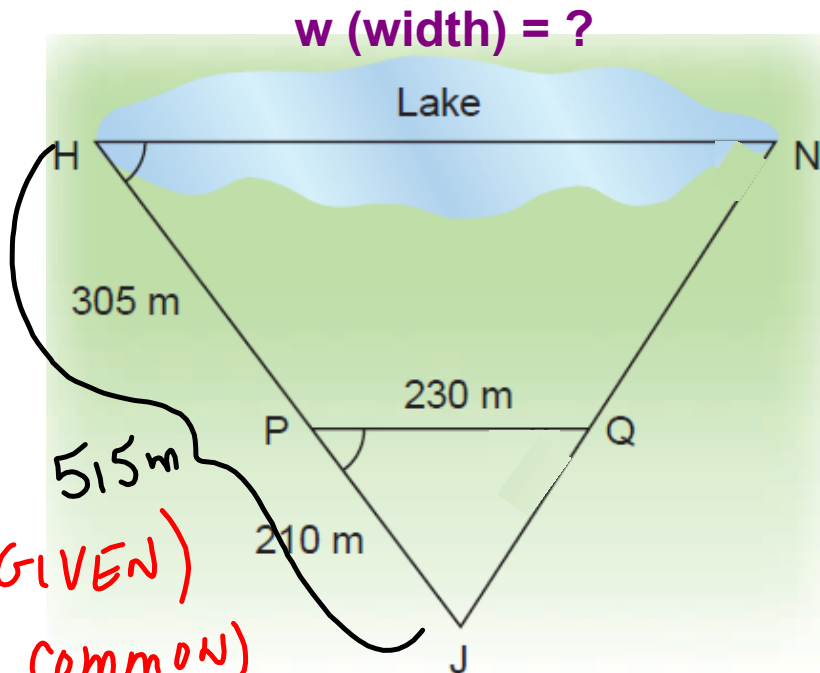

(page 350, #9

EXAMPLE:

a) Prove that these 2 triangles are similar.

b) Find the width of the lake to the nearest whole metre.

a) $\angle H = \angle P$ (GIVEN)
 $\angle J = \angle J$ (COMMON)
 $\angle N = \angle Q$ (S.A.T.T)

$\therefore \triangle HJN \sim \triangle PJQ$ (AAA)

$$\begin{aligned} SF &= \frac{S}{s} \\ &= \frac{515}{210} \\ &\doteq 2.4524 \end{aligned}$$

$$\begin{aligned} w &= 2.4524(230) \\ &\doteq 564.052 \\ &\doteq 564\text{m} \end{aligned}$$

OR

$$\frac{w}{230} = \frac{515}{210}$$

$$210w = 118450$$

$$w \doteq 564.0476$$

$$w \doteq 564\text{m}$$

EXAMPLE:

a) Prove that these 2 triangles are similar.

b) Find the width of the river to the nearest tenth of a metre.

a) $\angle C = \angle C$ (OAT)
 $\angle A = \angle E$ (GIVEN)
 $\angle B = \angle D$ (SATT)

$\therefore \triangle ABC \sim \triangle EDC$ (AAA)

b) $\frac{28.9}{73.2} = \frac{w}{98.3}$

$2840.87 = 73.2w$

$38.8097 = w$

$38.8 \text{ m} = w$

OR

$$\begin{aligned} SF &= \frac{S}{O} \\ &= \frac{73.2}{28.9} \\ &\doteq 2.5329 \end{aligned}$$

$$\begin{aligned} w &\doteq \frac{98.3}{2.5329} \\ &\doteq 38.8093 \\ &\doteq 38.8 \text{ m} \end{aligned}$$
