Q. 129

Review questions...

8. As Chloe and Ivan are paddling north on Lac La Ronge in Saskatchewan, they notice a campsite ahead, at  $N52^\circ W$ . They continue paddling north for 800 m, which takes them past the campsite. The campsite is then at  $S40^\circ W$ . How far away, to the nearest metre, is the campsite from their position at the second sighting?

$$\frac{x \sin 52^\circ}{\sin 88^\circ} = \frac{800 \sin 52^\circ}{\sin 88^\circ}$$

$$x = 630.3 \text{ m}$$

Q.154 #12

12. A canoeist starts from a dock and paddles 2.8 km N34°E. Then she paddles 5.2 km N65°W. What distance, and in which direction, should a second canoeist paddle to reach the same location directly, starting from the same dock? Round all answers to the nearest tenth of a unit.

①  $x^2 = 2.8^2 + 5.2^2 - 2(2.8)(5.2)\cos 81^\circ$

$2.8^2 + 5.2^2 - 2 * 2.8 * 5.2 * \cos(81)$ $30.32462838$ $\sqrt{\text{Ans}}$ $5.506788219$
-----------------------------------------------------------------------------------------------------

$x = (x = 5.5 \text{ km})$

②  $\frac{5.2}{\sin \theta} = \frac{5.5}{\sin 81^\circ}$

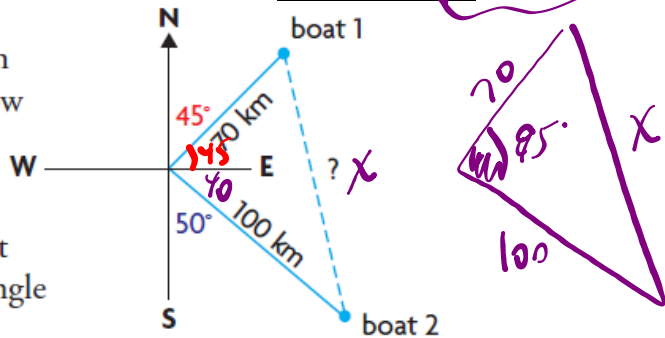

$\frac{5.2}{\sin \theta} = \frac{5.5}{0.987688}$

$\theta = 69^\circ$

P. 152 # 3, 4, 6

(3)  $x^2 = 70^2 + 100^2 - 2(70)(100)\cos 85$   
 $x^2 = 70^2 + 100^2 - 2(70)(100)\cos(85)$   
 $x^2 = 13679.8196$   
 $x = 116.9607609$   
 $x = 117 \text{ km}$

3. The radar screen of a Coast Guard rescue ship shows that two boats are in the area, as shown in the diagram. How far apart are the two boats, to the nearest tenth of a kilometre?

4. A parallelogram has adjacent sides that are 11.0 cm and 15.0 cm long. The angle between these sides is 50°. Determine the length of the shorter diagonal to the nearest tenth of a centimetre.

$x^2 = 11^2 + 15^2 - 2(11)(15)\cos 50$

$x^2 = 11^2 + 15^2 - 2(11)(15)\cos(50)$   
 $x^2 = 133.8800888$   
 $x = 11.57065637$   
 $x = 11.6 \text{ cm}$

$\cos A = \frac{b^2 + c^2 - a^2}{2bc}$

6. Terry is designing a triangular patio, as shown. Determine the area of the patio to the nearest tenth of a square metre.

(1)  $\cos \theta = \frac{9^2 + 8.5^2 - 7.1^2}{2(9)(8.5)}$

$\cos^{-1} \left( \frac{102.84}{153} \right)$

$\theta = 48^\circ$

(2)  $9 \sin 48^\circ = \frac{h}{9}$

$6.7 = h$

(3)  $A = \frac{8.5(6.7)}{2}$

$A = 28.4 \text{ m}^2$
