

Changing Population Sizes

Four variables affect changes in population sizes...

1. births
2. deaths
3. **immigration** - act of entering a nation
4. **emigration** - act of leaving a nation

[A person emigrates **from** Germany and then immigrates **to** Canada.]

$$\text{population change rate} = (\text{births} + \text{immigration}) - (\text{deaths and emigration})$$

gains
in
population

declines
in
population

The term "**population growth**" refers to how the number of individuals in a population increases (or decreases) with time.
