PRACTISING

2. Two forest-fire towers, A and B , are 20.3 km apart. From tower A , the compass heading for tower B is $S80^\circ E$. The ranger in each tower sees the same forest fire. The heading of the fire from tower A is $N50^\circ E$. The heading of the fire from tower B is $N60^\circ W$. How far, to the nearest tenth of a kilometre, is the fire from each tower?

$$\frac{y \sin 50^\circ}{\sin 20^\circ} = \frac{20.3 \sin 50^\circ}{\sin 110^\circ}$$

$$y = 16.5 \text{ km}$$

$$\frac{x \sin 20^\circ}{\sin 110^\circ} = \frac{20.3 \sin 20^\circ}{\sin 110^\circ}$$

$$x = 7.4 \text{ km}$$

13. A zip line is going to be suspended between two trees. From the forest floor, 12 m from the base of the smaller tree, the angles of elevation to the tree platforms measure 33° and 35° . The distance between the two trees is 35 m.

- a) Draw a diagram to represent this situation. What assumptions did you make?
- b) Calculate the length of the zip line needed.

$$\textcircled{2} \cos 33^\circ = \frac{12}{z}$$

$$z = \frac{12}{\cos 33^\circ}$$

$$z = 14.3$$

$$\textcircled{1} \cos 35^\circ = \frac{23}{y}$$

$$y = \frac{23}{\cos 35^\circ}$$

$$y = 28.1$$

$$\textcircled{3} x^2 = 28.1^2 + 14.3^2 - 2(28.1)(14.3)\cos 112^\circ$$

$x = 36\text{m}$

REVIEW - Trigonometry

- Pythagorean Theorem & Primary Trig Ratios

REMEMBER: "SOH CAH TOA"

$$\sin \theta = \frac{\text{opp}}{\text{hyp}} \quad \cos \theta = \frac{\text{adj}}{\text{hyp}} \quad \tan \theta = \frac{\text{opp}}{\text{adj}}$$

$$c^2 = a^2 + b^2$$

- Applications of Primary Trig

Also, note that the angle of elevation = angle of depression

- Law of Sines & Its Applications

$$\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C} \quad \frac{\sin A}{a} = \frac{\sin B}{b} = \frac{\sin C}{c}$$

SAA ↑

*SSA ↑

"when looking for a side" "when looking for an angle"

Ambiguous??? Need 3 C's...

CRITERIA CALCULATION CASES

- SSA $h = b \sin A$
 - 1) $a < h$
(no solution)
 - 2) $a = h$
(1 right triangle)
 - 3) $a > h$

- Law of Cosines & Its Applications

Finding an unknown side...
• 2 sides and a contained angle (SAS)

$$a^2 = b^2 + c^2 - 2bc \cos A$$

Finding an unknown angle...
• 3 known sides (SSS)

$$\cos A = \frac{b^2 + c^2 - a^2}{2bc}$$

- Bearings and Multi-step Word Problems
- "Solving" - find ALL angles & sides
* Ambiguous
