

INSTRUCTIONS...

Planning is key to any successful project! You will now begin to brainstorm and research project ideas. This project can be done in pairs or individually (groups of 3 need my approval). Keep in mind that the technologies in the MakerSpace are available for all groups but I am hoping that a pair of students will take ownership of a particular technology. As well, I encourage students to use more than one technology in their final project build. Since many of these technologies are new, start with easy objectives in the beginning in order to strengthen your skillset.

Save an electronic copy (found on homepage) and rename as your group. **(1) Outline what you would like to do using the available technologies above.** This could include further developing the technology, expanding on the technology or applying the technology. One important aspect of any build is communication. Be sure to visit any websites related to the technology, sign up for any newsletters/forums and check out the social media sites. **(2) Document all of these resources on your proposal by making hyperlinks.** It will be important to research the technology and search for possible ideas/designs/builds. Your final build does not need to be unique but be sure to customize for your own needs. **(3) List materials needed, include designs through a sketches/pictures and state what objectives/goals are set for your build.**

DUE: Project Proposal must be completed by Friday, Sept. 15th...email hallihana@nbed.nb.ca

[ONLY ONE PROPOSAL PER GROUP NEED TO BE SUBMITTED]

NOTE: This will be marked under documentation...same mark for both in the group!

NAMES: _____ **TEAM NAME:** _____
