

Population Growth...

- A population is a group of [organisms](#) of one [species](#) that interbreed and live in the same place at the same time (e.g. deer population).
- **Organism** → a living thing
- **Species** → level of classification
- The term "**population growth**" refers to how the number of individuals in a population increases (or decreases) with time.
- If a population has a constant birth rate through time and is never limited by food or disease, it has what is known as **exponential growth**.

Changing Population Sizes

Four variables affect changes in population sizes...

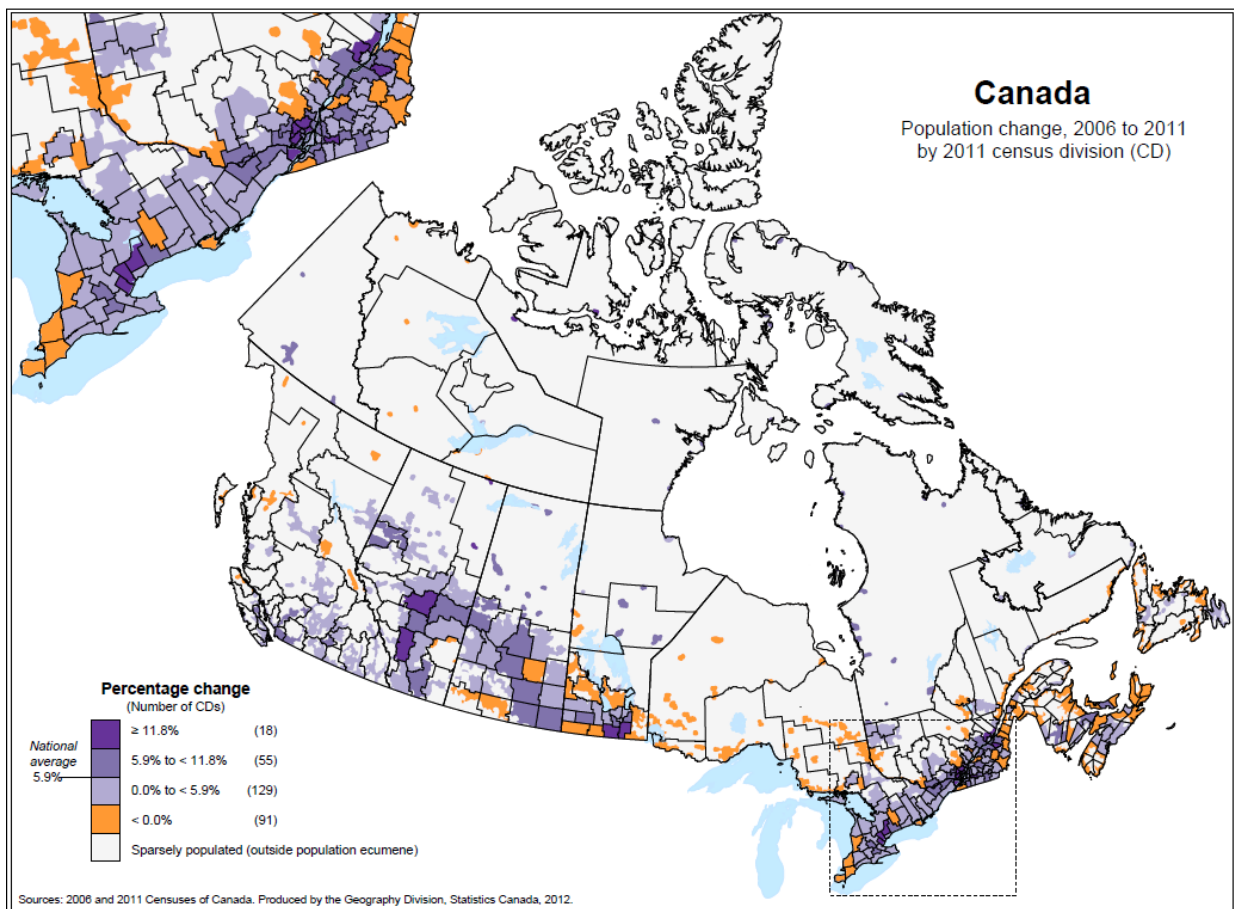

1. births
2. deaths
3. **immigration** - act of entering a nation
4. **emigration** - act of leaving a nation

[A person emigrates **from** Germany and then
immigrates **to** Canada.]

$$\text{population change rate} = (\text{births} + \text{immigration}) - (\text{deaths and emigration})$$

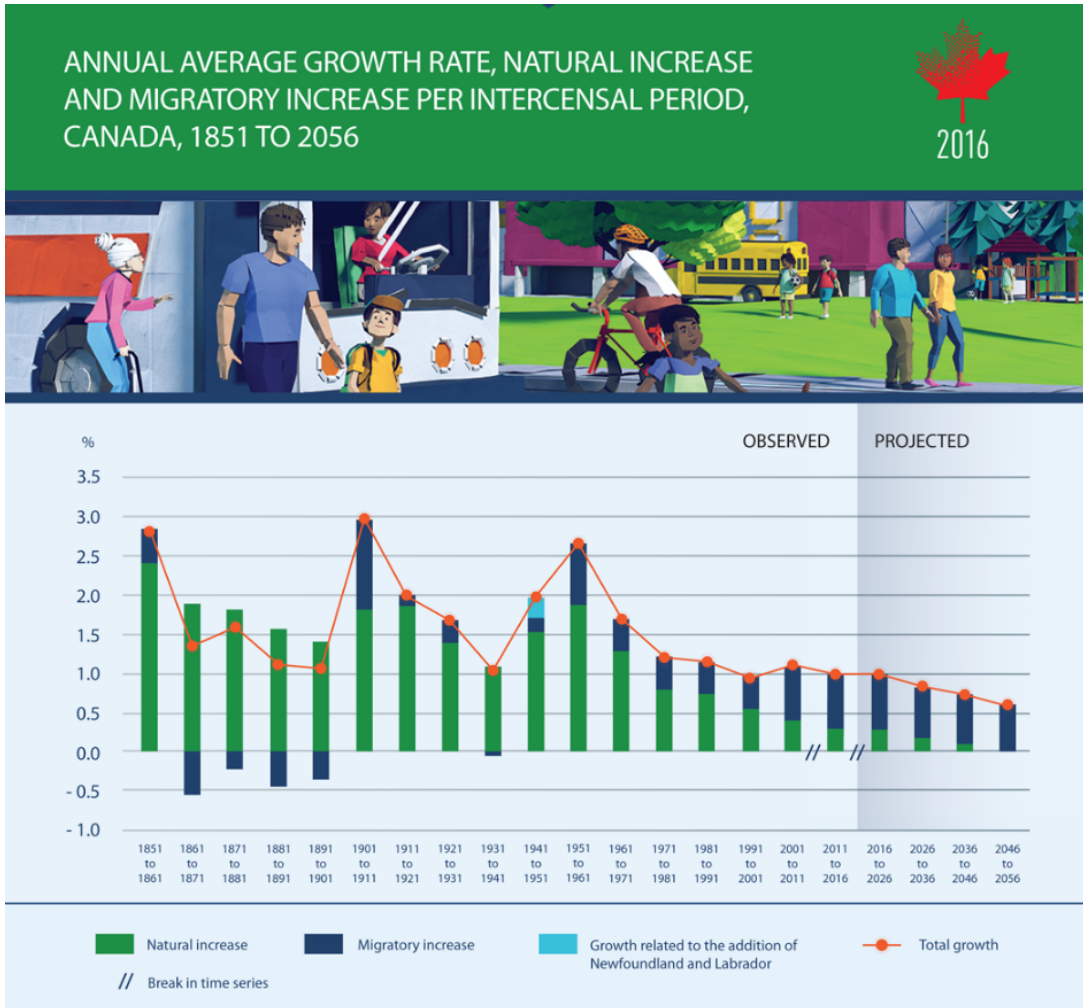

The term "**population growth**" refers to how the number of individuals in a population increases (or decreases) with time.

Let's look at some STATS from...

Chart 3
Population growth rate among census metropolitan areas (CMAs) in Canada, 2006 to 2011 and 2011 to 2016, ranked by percentage growth in 2016

LAB: Mark-Return-Recapture

1.2 A Sample Census-Wildlife.doc

Classroom

Lab - Mark_Return_Recapture.pdf

Lab Report - Mark_Return_Recapture.pdf

Field..Miramichi River

- NOTES:**
- Only 1 lab report needs to be passed per group.
 - If you are absent, see me to make it up during IS.
 - link is below for the extension question.

<http://www.miramichisalmon.ca/northwest-miramichi-river-smolt-study/>

DUE: By the end of class on Friday
