

Trigonometric Ratios

*** Must have calculator in DEGREE mode ***

Primary Trigonometric Ratios

$$\sin \theta = \frac{\text{opp}}{\text{hyp}}$$

$$\cos \theta = \frac{\text{adj}}{\text{hyp}}$$

$$\tan \theta = \frac{\text{opp}}{\text{adj}}$$

Memory Aid: "SOH CAH TOA"

EXAMPLE - Finding an unknown side

Solve CAH TOA

EXAMPLE - Finding an unknown angle

inverse

EXAMPLE - Solve the triangle (find ALL sides and angles)

$$\sqrt{1296} = 36$$

$$\sqrt{x} = x^{1/2}$$

$$x^{-1} = \frac{1}{x}$$

$$\sqrt{x^2} = (x^2)^{1/2} \\ = x$$

Applications of Right Angle Trigonometry

ANGLE OF ELEVATION/DEPRESSION

Angle of elevation - is the angle between the ground and the line of sight. (angle of inclination)

Always from the GROUND up

Angle of Depression - is the angle between the horizon and the line of sight.

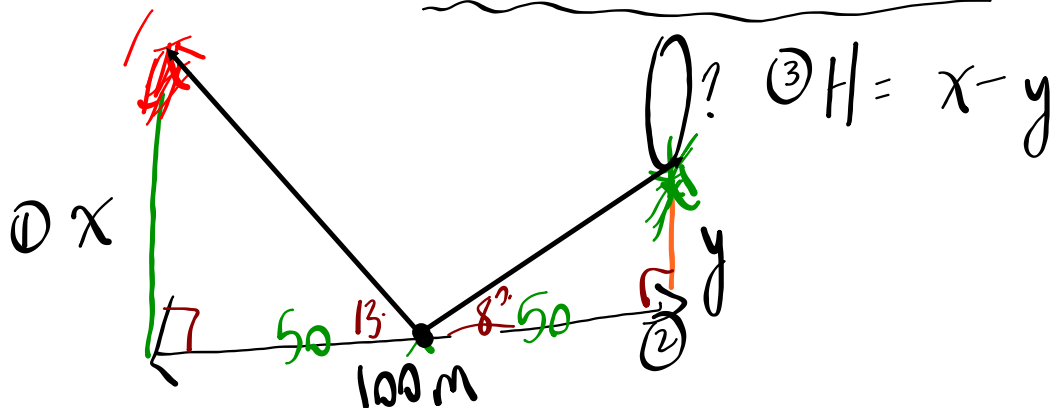

Always outside the triangle

\angle of elevation = \angle of depression

Example 1:

Two trees are 100m apart. From a point on midway between them, the angles of elevation to their tops are 8° and 13° . How much taller is one tree than the other?

① $50 \tan 13^\circ = \frac{x}{50}$ ② $\tan 8^\circ = \frac{y}{50}$

$11.5^m = x$

$50 \tan 8^\circ = y$
 $7.0 = y$

③ $H = 11.5 - 7$
 $= 4.5^m$

Example 2:

The 8th floor of an apartment building is 25m above the ground. From the 8th floor, the angle of elevation to the top of the other building is 50°. The angle of depression to the base of the taller building is 34°. Determine the height of the taller building.

$$\textcircled{1} \tan 34^\circ = \frac{25}{y}$$

$$y = \frac{25}{\tan 34^\circ}$$

$$y = 37.1$$

$$\textcircled{2} \tan 50^\circ = \frac{x}{37.1}$$

$$37.1 \tan 50^\circ = x$$

$$44.2 = x$$

$$\textcircled{3} h = 44.2 + 25$$

$$h = 69.2$$
