

Warm Up

Determine the sum of each of the following:

$$1) \frac{-3}{7} + \left(\frac{-3}{7} \right) = \underline{\underline{-\frac{6}{7}}}$$

$$2) \text{ a) } 2.7 + 1.8 \\ = \underline{\underline{4.5}}$$

$$\text{b) } -3.7 + 4.5 \\ = \underline{\underline{0.8}}$$

$$\text{c) } 2.7 + (-8.7) \\ = \underline{\underline{-6.0}}$$

Grade 9 Warm Up

1) Express each fraction as a decimal.

$$\text{a) } \frac{1}{5} = \underline{\underline{0.2}}$$

$$\text{b) } \frac{2}{15} = \underline{\underline{0.\overline{13}}}$$

$$\text{c) } \frac{-4}{13} = \underline{\underline{-0.307692...}}$$

2) Express each decimal as a fraction or mixed number in simplest form.

$$\text{a) } 0.4 = \frac{4}{10} = \underline{\underline{\frac{2}{5}}}$$

$$\text{b) } -3.2 = \underline{\underline{-\frac{32}{10}}} = \underline{\underline{-\frac{16}{5}}}$$

$$\text{c) } 1.125 = \frac{1125}{1000} = \frac{125}{100} = \underline{\underline{1\frac{5}{8}}}$$

3) Determine each sum using fractions. (Show all work and reduce final answers to lowest terms.)

$$\text{a) } \frac{-6}{5} + \left(\frac{-2}{5} \right)$$

$$= \underline{\underline{-\frac{8}{5}}}$$

$$= \underline{\underline{-1\frac{3}{5}}}$$

$$\text{b) } \frac{8}{3} + \frac{5}{4}$$

$$\frac{32}{12} + \frac{15}{12}$$

$$\frac{47}{12} = \underline{\underline{3\frac{11}{12}}}$$

$$\text{c) } -3\frac{2}{7} + 2\frac{1}{4}$$

$$\frac{-23}{49} + \frac{9}{4} \times 7$$

$$\frac{21}{28} = \underline{\underline{-1\frac{1}{28}}}$$
