

We started slope just after March Break, so I want you to look over the notes in the other file first.

Next, watch the two videos:

Video 1: Reminder on how to graph points on a coordinate grid (from previous years)

Video 2: How to find slope by graphing and by using the slope formula.

Attempt some of the questions attached.

First page: Do by graphing

Second Page: Use slope formula

Answers are provided after each page.
