

## UNIT 1: ROOTS AND POWERS

### SECTION 4.3: MIXED AND ENTIRE RADICALS

**K. Sears**

*NUMBERS, RELATIONS AND FUNCTIONS 10*

### WHAT'S THE POINT OF TODAY'S LESSON?

We will begin working on the NRF 10 Specific Curriculum Outcome (SCO) "Algebra and Numbers 3" OR "AN3" which states:

**"Demonstrate an understanding of powers with integral and rational exponents."**

## What does THAT mean???

SCO AN3 means that we will:

- \* apply the 6 exponent laws you learned in grade 9:

$$a^0 = 1$$

$$(a^m)(a^n) = a^{m+n}$$

$$a^m \div a^n = a^{m-n}$$

$$(a^m)^n = a^{mn}$$

$$(ab)^m = a^m b^m$$

$$(a \div b)^n = a^n \div b^n$$

- \* use patterns to explain  $a^{-n} = \frac{1}{a^n}$  and  $a^{\frac{1}{n}} = \sqrt[n]{a}$

- \* apply all exponent laws to evaluate a variety of expressions
- \* express powers with rational exponents as radicals and vice versa
- \* identify and correct errors in work that involves powers

## HOMWORK QUESTIONS???

(page 211, #3 TO #5, #7, #8, #10  
and #12 TO #14)

## RADICALS CAN BE WRITTEN AS PRODUCTS: ...

$$\begin{aligned} \text{EX.: } & \sqrt{16 \cdot 9} \\ & = \sqrt{144} \\ & = 12 \end{aligned}$$

$$\begin{aligned} \text{AND } & \sqrt{16} \cdot \sqrt{9} \\ & = 4 \cdot 3 \\ & = 12 \end{aligned}$$

## JUST AS WITH FRACTIONS, RADICALS CAN BE WRITTEN AS EQUIVALENT EXPRESSIONS:

$$\begin{aligned} \text{EX.: } & \sqrt[3]{8 \cdot 27} \\ & = \sqrt[3]{216} \\ & = 6 \end{aligned}$$

$$\begin{aligned} \text{AND } & \sqrt[3]{8} \cdot \sqrt[3]{27} \\ & = 2 \cdot 3 \\ & = 6 \end{aligned}$$

$$\begin{aligned} \sqrt{324} &= \sqrt{36 \times 9} \\ &= 6 \times 3 \\ &= 18 \end{aligned}$$

## EXPONENT LAWS (separate sheet):

1. **Zero Exponent Law:**  $a^0 = 1$        $2^0 = 1$
2. **Product of Powers:**  $(a^m)(a^n) = a^{m+n}$   
 $3^2 \cdot 3^3 = 3^5$
3. **Quotient of Powers:**  $a^m \div a^n = a^{m-n}$
4. **Power of a Power:**  $(a^m)^n = a^{mn}$
5. **Power of a Product:**  $(ab)^m = a^m b^m$        $(\frac{a}{b})^n = \frac{a^n}{b^n}$
6. **Power of a Quotient:**  $(a \div b)^n = a^n \div b^n$

## 7. MULTIPLICATION PROPERTY OF RADICALS:

$$\sqrt[n]{ab} = \sqrt[n]{a} \cdot \sqrt[n]{b} \quad (ab)^{\frac{1}{n}} = a^{\frac{1}{n}} b^{\frac{1}{n}} \text{ (HS)}$$

**EX.:**  $\sqrt{24}$       (Factors: 1, 2, 3, 4, 6, 8, 12, 24)

$$\begin{aligned}
 &= \sqrt{4 \cdot 6} \\
 &= \sqrt{4} \cdot \sqrt{6} \\
 &= 2 \cdot \sqrt{6} \\
 &= \underline{2\sqrt{6}} \text{ (MIXED RADICAL)}
 \end{aligned}$$

*Like mixed fraction  $2\frac{1}{2}$*

**EX.:**  $\sqrt[3]{24}$       (ENTIRE RADICAL)

$$\begin{aligned}
 &= \sqrt[3]{8 \cdot 3} \\
 &= \sqrt[3]{8} \cdot \sqrt[3]{3} \\
 &= 2 \cdot \sqrt[3]{3} \\
 &= \underline{2\sqrt[3]{3}}
 \end{aligned}$$

$$\begin{array}{l}
 \sqrt{24} = \sqrt{4 \times 6} \\
 \qquad = 2\sqrt{6} \\
 \begin{array}{l}
 | \\
 4 \\
 9 \\
 16 \\
 25
 \end{array}
 \end{array}
 \left.
 \begin{array}{l}
 \sqrt{80} = \sqrt{4 \times 20} \\
 \qquad = \sqrt{4 \times 4 \times 5} \\
 \qquad = 2 \times 2 \sqrt{5} \\
 \qquad = 4\sqrt{5}
 \end{array}
 \right\}$$

c)  $\sqrt{32} = \sqrt{16 \times 2}$   
 $\qquad = 4\sqrt{2}$

d)  $\sqrt{600} = \sqrt{100 \times 6}$   
 $\qquad = 10\sqrt{6}$

### 8. POWERS WITH RATIONAL EXPONENTS WITH A NUMERATOR OF 1:

$$x^{\frac{1}{n}} = \sqrt[n]{x}$$

EX.:

$$\begin{aligned}
 & 8^{\frac{1}{3}} \\
 & = \sqrt[3]{8} \\
 & = 2
 \end{aligned}$$

## 9. POWERS WITH RATIONAL EXPONENTS:

$$\begin{array}{ccc}
 \text{EXPONENT} & & \text{EXPONENT} \\
 \swarrow & & \swarrow \\
 x^{\frac{m}{n}} & = & \left(x^{\frac{1}{n}}\right)^m \\
 \uparrow & & \uparrow \\
 \text{INDEX} & & \text{INDEX} \\
 & = & \left(\sqrt[n]{x}\right)^m
 \end{array}
 \quad \text{AND} \quad
 \begin{array}{ccc}
 \text{EXPONENT} & & \text{EXPONENT} \\
 \swarrow & & \swarrow \\
 x^{\frac{m}{n}} & = & \left(x^m\right)^{\frac{1}{n}} \\
 \uparrow & & \uparrow \\
 \text{INDEX} & & \text{INDEX} \\
 & = & \sqrt[n]{x^m}
 \end{array}$$

EX.: Evaluate  $16^{\frac{3}{2}}$ .

$$\begin{array}{ccc}
 \begin{array}{l}
 \frac{3 \text{ (EXPONENT)}}{2 \text{ (INDEX)}} \\
 16^{\frac{3}{2}} \\
 = \left(\sqrt{16}\right)^3 \\
 = 4^3 \\
 = 64
 \end{array}
 & \text{OR} &
 \begin{array}{l}
 \frac{3 \text{ (EXP.)}}{2 \text{ (INDEX)}} \\
 16^{\frac{3}{2}} \\
 = \sqrt{16^3} \\
 = \sqrt{4096} \\
 = 64
 \end{array}
 \end{array}$$

**NOTE: THERE ARE SOME RADICALS THAT CANNOT BE SIMPLIFIED.**

EX.:  $\sqrt[4]{24}$  (Factors: 1, 2, 3, 4, 6, 8, 12, 24)

**24 HAS NO FACTORS OTHER THAN 1 THAT CAN BE WRITTEN AS A FOURTH POWER; THEREFORE, IT CANNOT BE SIMPLIFIED (WRITTEN AS A MIXED RADICAL).**

**WE CAN ALSO USED PRIME FACTORIZATION TO SIMPLIFY A RADICAL.**

**EX.:** Simplify each radical.

$$2 \times 2 \times 2 \times 2$$

$$\begin{aligned} \text{a) } \sqrt{80} & \\ & \sqrt{4 \times 20} \\ & \sqrt{4 \times 4 \times 5} \\ & = 2 \times 2 \sqrt{5} \\ & = 4\sqrt{5} \end{aligned}$$

$$\begin{aligned} \text{b) } \sqrt[3]{144} & \\ & \sqrt[3]{8 \times 18} \\ & 2\sqrt{18} \end{aligned}$$

$$\begin{aligned} \text{c) } \sqrt[4]{162} & \\ & \sqrt[4]{2 \times 81} \\ & 3\sqrt[4]{2} \end{aligned}$$

**YOU TRY!**

**EX.:** Simplify each radical.

$$\text{a) } \sqrt{63}$$

$$\text{b) } \sqrt[3]{108}$$

$$\text{c) } \sqrt[4]{128}$$

**LET'S TRY TO SIMPLIFY RADICALS WITHOUT USING PRIME FACTORIZATION, IF POSSIBLE.**

**EX.:** Write each radical in simplest form, if possible.

a)  $\sqrt[3]{40}$       b)  $\sqrt{26}$       c)  $\sqrt[4]{32}$

**YOU TRY TO SIMPLIFY RADICALS WITHOUT USING PRIME FACTORIZATION, IF POSSIBLE.**

**EX.:** Write each radical in simplest form, if possible.

a)  $\sqrt{30}$       b)  $\sqrt[3]{32}$       c)  $\sqrt[4]{48}$

## WRITING MIXED RADICALS AS ENTIRE RADICALS:

**EX.:** Write each mixed radical as an entire radical.

$$\begin{array}{lll}
 \text{a) } 4\sqrt{3} & \text{b) } 3^3\sqrt{2} & \text{c) } 2^5\sqrt[5]{2 \times 2 \times 2 \times 2 \times 2} \\
 = \sqrt{4 \times 4 \times 3} & = \sqrt[3]{3 \times 3 \times 3 \times 2} & \sqrt[5]{64} \\
 = \sqrt{48} & = \sqrt[3]{54} & 
 \end{array}$$

## YOU TRY WRITING MIXED RADICALS AS ENTIRE RADICALS:

**EX.:** Write each mixed radical as an entire radical.

$$\begin{array}{lll}
 \text{a) } 7\sqrt{3} & \text{b) } 2^3\sqrt{4} & \text{c) } 2^5\sqrt{3} \\
 \sqrt{7 \times 7 \times 3} & \sqrt[3]{2 \times 2 \times 2 \times 4} & \sqrt[5]{2 \times 2 \times 2 \times 2 \times 2 \times 3} \\
 = \sqrt{147} & = \sqrt[3]{32} & \sqrt[5]{96}
 \end{array}$$
