

Grade 9 Warm Up

Remember: $c^2 = a^2 + b^2$
 $b^2 = c^2 - a^2$

a)

b) Find the Surface Area of This Composite Object.
Each cube has edge length of 2 cm.

$$SA = \pi r^2 + \pi rs$$

Grade 9 Warm Up

Remember: $c^2 = a^2 + b^2$
 $b^2 = c^2 - a^2$

a)

$$c^2 = a^2 + b^2$$

$$c^2 = 10^2 + 9^2$$

$$c^2 = 100 + 81$$

$$\sqrt{c^2} = \sqrt{181}$$

$$c = 13.5 \text{ cm}$$

$$SA = \pi r^2 + \pi r s$$

$$SA = (3.14)(9)^2 + (3.14)(9)(13.5)$$

$$SA = (3.14)(81) + (3.14)(9)(13.5)$$

$$SA = 254.34 + 381.51$$

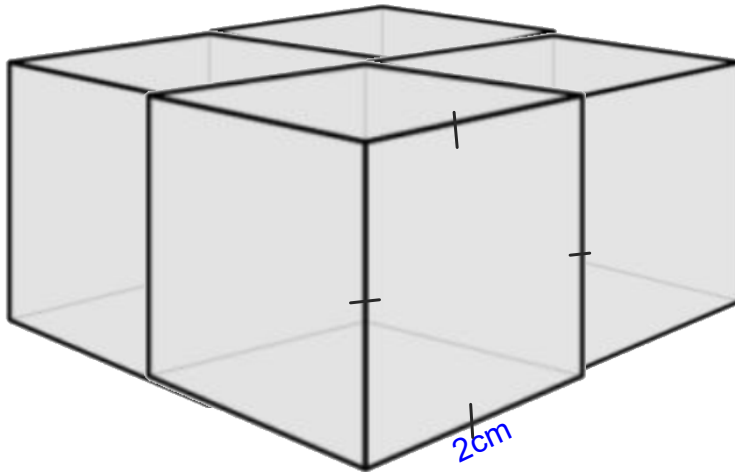

$$SA = 635.85 \text{ cm}^2$$

Warm Up Grade 9

Find the Surface Area of This Composite Object.
Each cube has edge length of 2 cm.

1 face

$$A = bxh$$

$$A = 2\text{cm} \times 2\text{cm}$$

$$A = 4 \text{ cm}^2$$

4 Cubes

Total number of faces = $6 \times 4 = 24$ faces

of overlaps = 4 \longrightarrow 8 faces

$$\begin{aligned} \text{Total Area of all cubes} &= 24 \text{ faces} - \text{overlap faces} \\ &= 24 - 8 \end{aligned}$$

$$= 16 \text{ Faces}$$

$$\begin{aligned} \text{Total SA} &= 16 \text{ Faces} \times \text{Area of one face} \\ &= 16 \times 4 \text{ cm}^2 \\ &= 64 \text{ cm}^2 \end{aligned}$$

Warehouse

The parts of the building that are not to be painted:
the floors;
windows and
doors

Warehouse Question

A warehouse measures 40 m by 20 m by 15 m.
An office attached to one wall of the warehouse
measures 3 m by 10 m by 5 m.

a) Determine the surface area of the building.

The parts of the building that are not to be painted:
the 2 floors; windows and doors

Find the area of the warehouse with the attached storage space.

(Think if you were going to paint this...How much paint is needed???)

Step 1) Calculate the sides of all of the larger prism, (40m , 20m , 15m)

<p>Top</p> <div style="border: 1px solid black; width: 40px; height: 20px; margin: 0 auto; display: flex; align-items: center; justify-content: center;">1</div> <p style="text-align: center;">40m 20m</p> <p>$A_1 = b \times h$</p> <p>$A_1 = 40 \times 20$</p> <p>$A_1 = 800 \text{ m}^2$</p>	<p>left/ right</p> <div style="border: 1px solid black; width: 15px; height: 20px; margin: 0 auto; display: flex; align-items: center; justify-content: center;">2</div> <p style="text-align: center;">15m 20m</p> <p>$A_2 = b \times h$</p> <p>$A_2 = 15 \times 20$</p> <p>$A_2 = 300 \text{ m}^2$</p> <p>$2A_2 = 600 \text{ m}^2$</p>	<p>Front / back</p> <div style="border: 1px solid black; width: 40px; height: 15px; margin: 0 auto; display: flex; align-items: center; justify-content: center;">2</div> <p style="text-align: center;">40m 15m</p> <p>$A_3 = b \times h$</p> <p>$A_3 = 15 \times 40$</p> <p>$A_3 = 600 \text{ m}^2$</p> <p>$2A_3 = 1200 \text{ m}^2$</p>
--	---	---

So surface area of the storage space is:

$$SA_{\text{big}} = A_1 + 2A_2 + 2A_3$$

$$SA_{\text{big}} = 800 + 600 + 1200$$

$$SA_{\text{big}} = 2600 \text{ m}^2$$

Step 2) Calculate the sides of all of the small prism, (3m , 10m , 5m)

<p>Top</p> <div style="border: 1px solid black; width: 10px; height: 3px; margin: 0 auto; display: flex; align-items: center; justify-content: center;">1</div> <p style="text-align: center;">10m 3m</p> <p>$A_1 = b \times h$</p> <p>$A_1 = 10 \times 3$</p> <p>$A_1 = 30 \text{ m}^2$</p>	<p>left/ right</p> <div style="border: 1px solid black; width: 5px; height: 3px; margin: 0 auto; display: flex; align-items: center; justify-content: center;">2</div> <p style="text-align: center;">5m 3m</p> <p>$A_2 = b \times h$</p> <p>$A_2 = 5 \times 3$</p> <p>$A_2 = 15 \text{ m}^2$</p> <p>$2A_2 = 30 \text{ m}^2$</p>	<p>Front / back</p> <div style="border: 1px solid black; width: 10px; height: 5px; margin: 0 auto; display: flex; align-items: center; justify-content: center;">2</div> <p style="text-align: center;">10m 5m</p> <p>$A_3 = b \times h$</p> <p>$A_3 = 5 \times 10$</p> <p>$A_3 = 50 \text{ m}^2$</p> <p>$2A_3 = 100 \text{ m}^2$</p>
--	---	--

So surface area of the storage space is:

$$SA_{\text{small}} = A_1 + 2A_2 + 2A_3$$

$$SA_{\text{small}} = 30 + 30 + 100$$

$$SA_{\text{small}} = 160 \text{ m}^2$$

Identify the Overlap Area: _____

Area of door

6m

$A_1 = b \times h$

$A_1 = 6 \times 1$

$A_1 = 6 \text{ m}^2$

Area of window

1m

$A_1 = b \times h$

$A_1 = 1 \times 1$

$A_1 = 1 \text{ m}^2$

$$TSA = SA_1 + SA_2 - \text{overlap} - \text{door} - \text{window}$$

$$= 2600\text{m}^2 + 160\text{m}^2 - 100\text{m}^2 - 6\text{m}^2 - 1\text{m}^2$$

$$= 2653\text{m}^2$$

b) A contractor quotes to paint the exterior of the building at a rate of $\$2.50/\text{m}^2$.

How much would it cost to paint the building?

$$\begin{array}{r} 2653\text{m}^2 \\ \times \$2.50 \\ \hline \$ 6\,632.50 \end{array}$$
